OBJECTIVE

Software Developer with proven experience building scalable backend and API-driven applications using Python (FastAPI, Django) and AWS. Passionate about integrating Generative AI/LLM features into production systems. Seeking a challenging role to deliver high-performance, reliable solutions while growing within a forward-thinking engineering team.

EDUCATION

Bachelor of Science in Computer Science

2022 – 2025

Farook College (Autonomous), University of Calicut — Kozhikode, Kerala

EXPERIENCE

Software Developer | [UCPro](#)

Sep 2025 – May 2026

- ▶ Developed backend modules for a Loan Management System using Django, PostgreSQL, and SQL, improving workflow efficiency across 5+ modules.
- ▶ Optimized SQL queries and backend logic, reducing API response times by ~25–30% in production.
- ▶ Architected an AI-powered Location Intelligence microservice using Python, FastAPI, PostgreSQL, spaCy NER, and Gemini AI.
- ▶ Built a news ingestion pipeline with RSS feeds, duplicate detection, location filtering, and AI-based impact scoring for real-estate intelligence.
- ▶ Implemented scheduled background processing and REST APIs with APScheduler and FastAPI, delivering scalable, database-backed location insights.

Web Developer | [TEDx Farook College](#)

Aug 2024 – Feb 2025

- ▶ Built responsive front-end components (HTML, CSS, JS), improving page load speed and visitor experience.
- ▶ Collaborated with marketing to redesign content workflows, reducing turnaround time for website updates.

SKILLS

Languages: Python, JavaScript, HTML, CSS

Backend: Django, FastAPI, Flask, REST APIs, Async Programming

Frontend: React.js, HTML, CSS

Databases: PostgreSQL, MongoDB, MySQL

Tools & Cloud: AWS (Lambda, deployment), Git, GitHub, Unix/Linux, OAuth, pytest/unittest

Specialties: Generative AI/LLM Integration, API Design, System Architecture, Debugging, Unit Testing, Microservices, Client-Server Architecture, spaCy NER

PROJECTS

Sentinels AI Firewall — Chrome Extension [\[Live\]](#)

Feb 2026 – April 2026

- ▶ Built a Chrome extension to detect and redact sensitive data (API keys) in real-time across AI tools
- ▶ Achieved 200+ downloads on the Chrome Web Store, demonstrating real-world adoption and usability
- ▶ Re-architected from AWS Lambda to a frontend-based solution, reducing latency by ~50% by eliminating cold start delays.

WealthFy — AI-Powered Personal Finance Application [\[Live\]](#)

July 2025 – Aug 2025

- ▶ Developed a full-stack financial app with a FastAPI backend and React frontend, utilizing asynchronous programming (Async/Await) to handle concurrent LLM and API requests., supporting end-to-end user financial data management.
- ▶ Full-stack app with FastAPI backend and React frontend using async programming to handle concurrent LLM and API requests.
- ▶ Designed RESTful APIs, relational schemas, and business logic to manage user financial data securely and efficiently.
- ▶ Integrated a Generative AI/LLM chatbot to analyze user data and deliver real-time financial insights via interactive dashboards.

CERTIFICATIONS

- ▶ **The Complete Python Bootcamp** — Udemy
- ▶ **Generative AI for Software Development** — DeepLearning.AI
